

# DURA-SIL® Silicone Inflation Assemblies

## Silicone...for the Ultimate Inflations!

Silicone rubber is highly regarded as the ultimate inflation material for milking cows. Soft and pliable, it keeps its shape for consistent performance over many thousands of cow milkings. And its hygienic nature promotes clean, healthy milking.

## Leading Through Innovation!

Sil-Tec Products is a world leader in the manufacturing of silicone inflations. The new DURA-SIL Silicone Inflation Assemblies have resulted from extensive materials research and product engineering, and are the ultimate expression of these technologies. The specially formulated silicone inflation resists deterioration and maintains its resilience and dimensions. The patented, impact-resistant plastic shell completely protects the silicone inflation. Even the visible connector has an extra high capacity design.

## Milks Clean, Fast and Easy!

New Dura-Sil inflation assemblies are designed to milk fast and clean, for the ultimate in long-life silicone milking. The seamless interior of the patented inflation, combined with the absence of expansion rings or other crevice-creating components, eliminates hiding places for bacteria. And the special triangular inflation body minimizes teat end pinch, while its three-way massage provides superior milking.

## Silicone Inflation Lasts and Lasts and Lasts!

Dura-Sil Silicone Inflation Assemblies are recommended for 6,000 individual cow milkings. That's up to six times longer than ordinary rubber inflations! And since they're disposable, you simply replace with a fresh new inflation assembly every 6,000 milkings. Your labor savings from changing inflations less often can really add up! Your Sil-Tec dealer can help determine if DURA-SIL assemblies match up with your cows and equipment.

- Disposable design eliminates the hassle of changing inflations.
- Choice of patented silicone inflation styles to match your cows' teats.
- Radial spoke mouthpiece seals gently for reduced slippage.
- Triangular inflation provides a gentle, uniform massage.

Special  
Triangular  
Shape

Three-way  
Massaging  
Action

- Impact-resistant plastic shell components are completely factory-sealed.
- Choice of vented or non-vented extra high capacity visible connector.
- High capacity natural rubber milk tube is cut resistant.
